

## ☀️ Daily report for [July 07]

### ✨ Achievements:

- Created `live_view/list/index.ex` for Todo Lists with modal support
- Integrated `TeslaClientMock` for LiveView and controller testing
- Implemented modal open/close events and form submission handling
- Flash messages added:
  -  List saved successfully!
  - Form failed: `:bad_request`
- Wrote LiveView tests for:
  - Rendering list items from API
  - Modal visibility toggle
  - Successful and failed form submission
- Fixed flash assertion failures using `render(view)` instead of `has_element?`

### 🚧 Challenge:

- One test (`submits new list successfully`) required multiple debug iterations due to emoji/text mismatch in flash
- Resolved assertion using full render match

### Plan for Tomorrow:

- Investigate and fix the **one remaining test that hasn't run**
- Read Phoenix LiveView testing documentation to improve test reliability
- Continue improving test coverage and stability

- Add missing tests for edit functionality if time permits
